

# SOIL CREATOR AridGrow<sup>®</sup> PHSC-C CONCENTRATE 1:20

## PROPERTIES:

- Creates soil structure in an environmentally safe manner.
- Enriches soil with natural organic ingredients, humus, humic acids, etc.
- Restore and maintains long-term soil fertility and its microbiological activity.
- Losses of an organic substance due to it mineralization in an ameliorated sandy soil at cultivation row-crop cultures during 5 years take 30-35%, that in 2,5 times less, than at use of any organic fertilizers.
- Reduces soil salinization and has high stability to microbiological and oxidizing destruction.
- Considerably reduces receipt of heavy metals and radioactive nuclides in plants.
- Interferes with a soil crust formation and reduces unproductive moisture losses on physical evaporation and infiltration.
- Accumulates and keeps moisture in 20 times more than it weight.
- Raises plant resistance to disease, heat and frost damage.
- Does not contain pathogenic microflora, seeds of weeds and genetically modified organisms.
- Has no limitation on use in soil management and agriculture.

## APPLICATION:

- Before its original application, the Concentrated Powdered Humic SOIL CREATOR AridGrow<sup>®</sup> PHSC-C should be mixed with a wellsifted (through a project strainer with a cell <10 mm) local soil in a ratio 1:20 (it depends on a type of the soil) with addition of the 100 liters for 1 cubic meter of a mixture ready-to-use liquid IRRIGATION SOLUTION AridGrow<sup>®</sup>. In result it is created a READY-TO-USE SOIL MIXTURE AridGrow<sup>®</sup>.
- <u>For example:</u> 50 kg of the AridGrow<sup>®</sup> PHSC-C is necessary to mix with 1 cubic meter of the wellsifted local soil with addition of the 100 liters of the ready-to-use liquid IRRIGATION SOLUTION AridGrow<sup>®</sup>.
- Put down SOIL MIXTURE AridGrow® in the hollow with a fixed tree or a shrub or scatter it on a surface using an ordinary agricultural cultivator and water with IRRIGATION SOLUTION AridGrow® as necessary or spread it . All subsequent agrotechnical measures are carried out using standard regulations for cultivation of a grown culture.
- **Consumption** of the Concentrated Powdered Humic SOIL CREATOR AridGrow<sup>®</sup> PHSC-C is **about 25 kg** for 1 planted tree, 5 shrubs or 25 square meters of an agricultural application (it depends on a type of a plant) **per 10 YEARS**.
- Detailed instructions how to use AridGrow<sup>®</sup> Poducts for local soils and various plants will be given after contracting.

#### MANUFACTURER'S RECOMMENDATIONS FOR APPLICATION SOIL CREATOR AridGrow<sup>®</sup> PHSC-C

### TR BY 490421644.005-2020

Powdered humic Soil Conditioner of a long-term effect SOIL CREATOR AridGrow® PHSC-C is applied ONLY ONE TIME per 5-10 Years for creation, restoration and improving fertility of the desert, arid, exhausted and degraded soils in an environmentally safe manner at the molecular level. It is used as a soil mixture of the product 1:20 (1 kg of concentrate per 20 kg of soil) for population or by spreading on the surface and mixing into a depth of roots of cultivated cultures for agriculture. It acts for a long period of time, accumulating moisture and significantly improving the agro-chemical and water-physical properties of the soils.

Depending on a degree of depletion or degradation of the soils, consumption of the product is increased or reduced. In the desert or arid soils application rates must be increased up to 2 times, but in regularly cultivated, arable soils application rates must be reduced by 2 times. The following table shows average level of consumption of the product for the regularly cultivated moderately fertile soils.

# SOIL ACTIVATOR AridGrow<sup>®</sup> LHSA-C CONCENTRATE 1:100

## PROPERTIES:

- Activates agrophysical and agrochemical processes in the soils in an environmentally safe manner.
- **Powerful soil enhancer**. Improves soil fertility and its microbiological activity.
- **Promotes** hormonal and antioxidant activity, plants nutrient uptake.
- Stimulates root and plant growth, accelerates seed germination.
- Increases mass of plants and fruits, improves decorative properties of floral cultures.
- Reduces soil salinization and migratory mobility of contaminants in the ionic form and their movement to ground waters. and a zone of moisture evaporation.
- Actively forms water-soluble connections with ions of polyvalent metals and radioactive nuclides that completely stop their migration from soils to plants.
- Reduces dependence on chemical applications and fertilizer requirements.
- Raises plant resistance to disease, heat and frost damage.
- Does not contain pathogenic microflora, seeds of weeds and genetically modified organisms.
- Has no limitation on use in soil management and agriculture.

## APPLICATION:

- Before its original application, the Concentrated Liquid Humic SOIL ACTIVATOR AridGrow<sup>®</sup> LHSA-C should be diluted with the local freshened irrigating water in a ratio 1:100, therefore it is created a highly nourishing and READY-TO USE IRRIGATION SOLUTION AridGrow<sup>®</sup>.
- <u>For example</u>: One liter of the AridGrow<sup>®</sup> LHSA-C is necessary to dilute with 100 liters of the local freshened irrigating water.
- You need the further watering THREE TIMES PER EVERY 14 DAYS ONLY by IRRIGATION SOLUTION AridGrow® for an extra feeding. In addition, You can use a drip irrigation system or spray.
- **Consumption** of the Concentrated Liquid Humic SOIL ACTIVATOR AridGrow<sup>®</sup> LHSA-C is about 5 liters for 1 planted tree, 2 shrubs or 5 square meters of the gardening territory per 1 YEAR.
- Detailed instructions how to use AridGrow<sup>®</sup> Poducts for local soils and various plants will be given after contracting.

## MANUFACTURER'S RECOMMENDATIONS FOR APPLICATION SOIL ACTIVATOR AridGrow<sup>®</sup> LHSA-C

TR BY 490421644.005-2020

Liquid humic Soil Conditioner of a long-term effect SOIL ACTIVATOR AridGrow<sup>®</sup> LHSA-C is applied ONLY THREE TIMES per Year or One Harvest Season for activization of the soil recovery processes and improving fertility of the desert, arid, exhausted and degraded soils in an environmentally safe manner at the molecular level.

It is used as a water solution of the product 1:100 (1 liter of concentrate per 100 liters of water) for irrigation, watering or spraying as for population, so for agriculture. It acts for a long period of time significantly improving the agro-chemical and water-physical properties of the soils.

Depending on a degree of depletion or degradation of the soils, consumption of the product is increased or reduced. In the desert or arid soils application rates must be increased up to 2 times, but in regularly cultivated, arable soils application rates must be reduced by 2 times. The following table shows average level of consumption of the product for the regularly cultivated moderately fertile soils.

| (  | Method of   |            | Application Rates  |   |  |
|--|---|------------|--|---|--|
| Culture  | Application   | Qty        | For<br>Population  | For<br>Agriculture  | Application Results  |
| 1. Indoor Plants<br>and Flowers                                    | 1. Soaking the seeds<br>before planting for<br>24 hours  | 1<br>Time  | 50 ml<br>per 5 l<br>of water per<br>10 kg<br>of seeds            | 5  <br>per 500   of<br>water<br>per 1 MT<br>of seeds  | Improves seeds germination,<br>raises numbers of wealthy<br>sprouting and disease resistance  |  |
|   | 2. Watering<br>seedlings in 3-4<br>days after pricking,<br>and in 7 days before<br>transplanting into<br>the soil                                    | 2<br>Times | 50 ml<br>per 5 l<br>of water<br>per 10 m²                        | 5  <br>per 500  <br>of water<br>per 1 ha              | Stimulates growth and develop-<br>ment, raises numbers<br>of wealthy sprouting<br>and disease resistance  |  |
|   | 3. Watering<br>in a root zone<br>in 7 days after<br>replanting, in a<br>phase of budding,<br>blooming and then<br>every 14 days<br>before harvesting | 3<br>Times | 50 ml<br>per 5 l<br>of water<br>per 10 m²                        | 5  <br>per 500  <br>of water<br>per 1 ha              | Increases size and mass of<br>fruits, yielding capacity,<br>reduces time of maturation,<br>improves product quality   |  |
|   | 1. Soaking the seeds<br>before planting for<br>24 hours  | 1<br>Time  | 50 ml<br>per 5 l<br>of water<br>per 10 kg<br>of seeds            | 0,5  <br>per 50  <br>of water<br>per 1 MT<br>of seeds | Improves seeds germination,<br>raises numbers of wealthy<br>sprouting and disease resistance  |  |
| 18. Cucumbers<br>(indoor & outdoor)   | 2. Watering<br>in a root zone in a<br>phase of 1-2 & 3-4<br>real leaves and<br>every 14 days<br>before harvesting                                    | 3<br>Times | 50 ml<br>per 5 l<br>of water<br>per 10 m²                        | 5  <br>per 500  <br>of water<br>per 1 ha              | Stimulates growth and develop-<br>ment, increases size and mass<br>of fruits, yielding capacity,<br>reduces time of maturation,<br>improves product quality   |  |
|   | 3. Spraying<br>at the first signs<br>of disease or decay<br>every 14 days  | 2<br>Times | 50 ml<br>per 5 l<br>of water<br>per 10 m²                        | 5  <br>per 500  <br>of water<br>per 1 ha              | Increases resistance to disease<br>and wilt, improves product quality   |  |
| 19. Currant,<br>raspberries,<br>blueberries,<br>gooseberries,<br>grapes and etc.                            | Watering<br>in a phase of bud<br>burst and<br>active growth<br>every 14 days   | 3<br>Times | 1  <br>per 100  <br>of water<br>per 10<br>bushes                 | 5  <br>per 500  <br>of water<br>per 100<br>bushes     | Stimulates growth and develop-<br>ment, increases resistance to<br>disease, wilt, heat & frost,<br>increases size and mass<br>of berries, yielding capacity,<br>reduces time of maturation,<br>improves product quality |  |
| 20. Apple, pear,<br>plum, cherries,<br>citrus fruits, olives,<br>date palms and etc.<br>(adult fruit trees) | Watering<br>in a root zone<br>immediately after<br>replanting and then<br>every 14 days  | 3<br>Times | 1  <br>per 100  <br>of water<br>per 10<br>nursery<br>transplants | 10  <br>per 1 t<br>of water<br>per 100<br>trees       | Stimulates growth and develop-<br>ment, increases resistance to<br>disease, wilt, heat & frost,<br>increases size and mass<br>of fruits, yielding capacity,<br>reduces time of maturation,<br>improves product quality  |  |

\*ATTENTION: WHEN SPRAYING AVOID DIRECT CONTACT OF THE PRODUCT WITH FLOWERS OR DO NOT SPRAY INTO THE BLOOMING FLOWERS!

Dear Friends ! Garden the desert <sub>@</sub> We are very glad to present You an innovative novelty -Desert Gardening Technology AridGrow<sup>®</sup> and its Products !

AridGrow<sup>®</sup> Products are Powdered & Liquid Soil Conditioners of a Long-Term Effect and highly concentrated Natural Products, processed from Peat by special AridGrow® Technology with the purpose of modifying its physical and chemical properties and qualities for consumer demands and designed to restore depleted and degraded soils, disturbed by human activities and increase their fertility, best for desertification areas by reducing unproductive losses of soil moisture by evaporation and seepage and excellent for environmentally pure and safe crop production. Powerful soil enhancers. Improves soil fertility and its microbiological activity. Universal means for activization of the agrophysical and agrochemical processes in the soils and extirpation with their salinization. Good way for domestication and gardening of the arid and exhausted territories. Highly effective to both soils and plants.

AridGrow<sup>®</sup> Products can be used in Organic Farming for any indoor & outdoor decorative plants & flowers, for greening construction, road fences, sport fields & golf courses, for fruits & vegetables gardening, crops cultivation and etc.

AridGrow<sup>®</sup>Products are developed by the Institute for Nature Management of the National Academy of Sciences of Belarus with scientific-technical support of the UK scientificresearch company «AridGrow Laboratories Ltd.» and passed successful comprehensive tests during 15 years in the Middle East. Recommended to use by the Ministry of Natural Resources and Environmental Protection of the Republic of Belarus and the Regional Office for the Near East and North Africa of the Food and Agriculture Organization of the United Nations. Certified in the European Union for Organic Farming.

Made in Belarus by Belarus-UK joint venture «AridGrow Production Ltd.» under the license and control of the UK scientific-research company «AridGrow Laboratories Ltd.».

For buying AridGrow<sup>®</sup> Products contact: BELARUS-UK JLLC "ARIDGROW PRODUCTION" Chervonoe 31-1, Zhitkovichi District, Gomel Region Tel: +375 (29) 369-00-99 | Fax: +375 (17) 369-00-99 More details at: www.aridgrow.international
